EDUCATION

National Polytechnic University of Armenia (2023-2027)

Bachelor's degree in Information Technology / Computer Science.

Synopsys Armenia Educational Department (2025-2027)

Bachelor's degree in Electronic Design Automation.

Picsart Academy (2026-2027)

AI & Data Science Courses

TECHNICAL SKILLS

Programming: Python, SQL, C++, JavaScript, Verilog

ML & Data: Deep Learning, Predictive Modeling, Data Preprocessing, Microsoft Excel

Tools: Linux (Ubuntu), Windows, Git, Bash, VS Code

EDA: Synopsys EDA tools, Digital Design

LANGUAGES

Armenian - Native

English - Intermediate

Russian - Fluent

PROFILE

Data Science and Machine Learning student with hands-on experience in Python, C++, predictive modeling, and deep learning. Currently advancing my AI/ML skills at Picsart Academy.

PROJECTS

ML Power Consumption Prediction Tool
2026-Present

Developed a machine learning-based surrogate model for early-stage digital IC power estimation. Automated dataset generation and preprocessing using Python and custom TCL scripts. Trained regression models to predict dynamic and leakage power from design and PVT features.

Bank Statement Analyser 2026 - Present

Developed a Python-based tool to extract, clean, and structure data from bank statements. Processed unstructured financial text and grouped transactions into structured records. Generated summarized transaction data to support financial analysis.

Custom Programming Language 2026

Developed a custom programming language from scratch using C++. Implemented a compiler, interpreter, and virtual machine to process and execute custom programs. Designed the core components required for compilation and program execution.

Web Media Downloader 2026

Developed a Python-based web automation tool for handling media requests. Implemented functionality to retrieve and download web video streams. Automated the media downloading workflow through a specialized Python tool.

Web Projects & Games 2023

Developed interactive web applications using JavaScript and third-party REST APIs. Implemented real-time weather forecasting and currency conversion functionality. Built browser-based games with state management, user events, and algorithmic logic.
