EDUCATION

- **National Polytechnic University of Armenia (2021-2027)**

  Bachelor's degree in Information Technology / Computer Science.
- **Synopsys Armenia Educational Department (2025-2027)**

  Bachelor's degree in Electronic Design Automation.
- **Picsart Academy (2026-2027)**

  AI & Data Science Courses
- **Polytechnic High School (2018-2021)**

  High School Diploma

TECHNICAL SKILLS

- **Languages:** Python, SQL, C++, JavaScript, Verilog
- **ML & Data Analysis:** Deep Learning, Predictive Modeling, Data Preprocessing, Microsoft Excel
- **Dev Tools & OS:** Linux (Ubuntu), Windows, Git, Bash, VS Code
- **Hardware & EDA Concepts:** Synopsys EDA tools, Digital Design Concepts

LANGUAGE

- Armenian (Native)
- English (Intermediate)
- Russian (Fluent)

PROFILE

Motivated Data Science & Machine Learning Enthusiast with a strong engineering and computer science background. Experienced in core programming with Python, C++, and Linux environments, with practical project exposure to predictive modeling, deep learning (MLP), and data analytics. Currently refining Advanced AI and Machine Learning concepts at Picsart Academy. Eager to leverage technical skills, algorithmic thinking, and hardware-software insights in an entry-level ML / Data Science role.

PROJECTS

Power Predictor - ML Power Consumption Prediction Tool | Diploma Work **2026-Present**

- Designed and trained a Deep Learning architecture to predict power consumption in digital integrated circuits.
- Automated data preparation pipelines using custom TCL scripts.
- Applied machine learning regression techniques to early-stage design metrics to minimize time-consuming synthesis iterations.

Bank Statement Analyser | Python, Data Processing **2026-Present**

- Developed an automated tool in Python to extract, clean, and structure data from financial bank statements.
- Processed unstructured financial text, grouped transactions, and generated summary data insights.

Custom Programming Language | C++ **2026**

- Built a complete programming language from scratch using C++, including a custom compiler, interpreter and virtual machine.

Web Media Downloader | Python **2026**

- Built a specialized web automation tool in Python to handle media requests and download web video streams cleanly.

Web Projects & Games | JavaScript **2023,2026**

- Built interactive web applications integrating third-party REST APIs for real-time weather forecasting and currency conversion.
- Implemented state management, user events, and algorithms for interactive browser games (Tic-Tac-Toe, BlackJack, Kill The Mole).
